

Towards integrated European marine research strategy and programmes

http://www.seas-era.eu

First SEAS-ERA Strategic Forum

Report

WP1 Task 3 Deliverable 1.3.1 a

October 2011 Marine Board-ESF

SEAS-ERA:

Grant agreement number: 249552

Project acronym: SEAS-ERA

Project title: Towards Integrated Marine Research Strategy and Programmes

Funding scheme: FP7 Co-ordination Action

Deliverable: D 1.3.1 a "First SEAS-ERA Strategic Forum Report"

Lead partner: Marine Board-ESF (Partner 18)

Date: October 2011 (Month 18)

Disclaimer:

SEAS-ERA Deliverable D1.3.1a was produced by the Marine Board-ESF Secretariat (author: Maud Evrard) for the FP7 SEAS-ERA consortium. The information and views set out in this report do not necessarily reflect the formal opinion of the Marine Board-ESF or its Member Organisations.

First SEAS-ERA Strategic Forum "SEAS-ERA & JPI Ocean: commonalities and synergies"

07 September 2011, Brussels

Forum Report

1. Welcome

Niall McDonough (Marine Board-ESF; SEAS-ERA WP1 leader) opened the Forum. This SEAS-ERA Forum is the first of a series. The Forum agenda (see Annex I) was designed specifically to provide an opportunity for:

- Updates and exchange of information between the SEAS-ERA ERA-NET project and the JPI Oceans;
- Interaction and exchange amongst marine and environmental ERA-NETs;
- Interaction and exchange between the marine and environmental ERA-NETs and the JPI Oceans.

Participants were invited to introduce themselves (see full list of participants in Annex II).

2. SEAS-ERA: objectives, progress to date and suggestions for synergies with JPI

Joan Albaiges (MICINN, Spain; SEAS-ERA Coordinator) gave an update on the current status of the SEAS-ERA project (see presentation in Annex III).

SEA-ERA

SEAS-ERA, as an overarching marine FP7 ERA-NET, is of strategic importance for the European Research Area. Several European strategic fora (e.g. ESFRI) have emphasised marine research as a field where major synergistic benefits can be reached by improving the coordination of research and infrastructure investments. The overarching objective of SEAS-ERA is to facilitate the establishment of a stable and durable structure for strengthening marine research across European Sea Basins. To do so, the project brings together 20 major European Marine Research Funding Organisations from 19 countries and the Marine Board-ESF.

See <u>www.seas-era.eu</u>

The SEAS-ERA coordinator stressed the role of SEAS-ERA in the process of building a durable platform of funding agencies for developing the ERA in marine science, combining a strong regional component with the pan-European dimension. In this respect, he saw strong potential for synergies with JPI Oceans and the marine and environmental ERA-NETs in order to:

- Inform the development of the JPI Oceans Strategic Research and Innovation Agenda through SEAS-ERA Sea Basin Strategic Research Agendas for the Atlantic, the Mediterranean and Black Sea (to be published in 2012);
- Follow up and assess outcomes of the research projects funded through ERA-NET joint calls:
- Consolidate a common strategic vision for Marine Research Infrastructures (MRIs) following the SEAS-ERA ambitious road map on management and investments of MRIs, built on the achievement of previous ERA-NETs (e.g. MarinERA) and statements (e.g. Ostend Declaration 2010, Brest Declaration 2011);
- Use the existing experience on how cooperation can be built towards neighbouring countries, particularly at regional level, and in connection with the issues of cross border funding.

The need to engage with various stakeholders was highlighted.

- At the regional level: regional conventions (Black Sea Convention, OSPAR, HELCOM, etc.) are consulted when developing the Sea Basin SRAs;
- At the national level: engaging with national actors (in charge of the implementation of policies) remains a challenge. Activities in line with some specific policy requirements, e.g. Marine Strategic Framework Directive, may trigger their interest;
- Within new spheres: Human Capacity Building, which is not usually addressed by ERA-NETs, could trigger interactions with new types of stakeholders and provide additional added value to the project outputs.
- 3. JPI "Healthy and Productive Seas and Oceans": objectives, progress to date and suggestions for synergies with SEAS-ERA

Rudy Herman (Flemish Government – Department of Economy, Science and Innovation (EWI), Belgium; JPI Oceans) gave a presentation on the current status of the JPI Oceans and consultation process (see Annex IV).

JPI Oceans

The Joint Programming Initiative Healthy and Productive Seas and Oceans (JPI Oceans) is a coordinating and integrating long-term platform, open to all EU Member States and Associated Countries which invest in marine and maritime research.

While bringing together the interested Member States and Associated Countries the JPI Oceans aims to add value by:

- avoiding fragmentation and unnecessary duplication
- planning common and flexible initiatives
- facilitating cooperation and foresight
- establishing efficient mechanisms for interaction and knowledge transfer between the scientific community, industry & services, and policy makers at high level to more effectively solve the grand challenges

See <u>www.jpi-oceans.eu</u>

He emphasised that the JPI is a policy driven process aiming at building the ERA and providing knowledge-based solutions to Grand Challenges ahead of Europe.

He highlighted that the JPI Oceans aims to:

- Develop a long term perspective and capacity building;
- Benefit from high-level commitment, since it is a EU Member and Associated State driven initiative;
- Operate a variable geometry approach (global approach vs. local solutions) the latter
 offers the regional approach a good platform to be strengthened. It will be up to the
 Member States to decide at which level to set their involvement (if any), such an
 approach also offers opportunities for interactions with and support from other sea
 basins;
- Engaging with relevant stakeholders (multi-sectoral representation);
- Developing a science to policy mechanism;
- Developing a common strategic agenda.

He identified areas of possible synergies and mutual benefits between JPI Oceans and the marine and environmental ERA-NETs:

- Mapping it is crucial to avoid duplication (e.g. in requests and data collected) and "customer overkill";
- JPI pilots the JPI pilot activities will address gaps identified within and beyond the ERA-NETs. Possible tools for the JPI (such as ERA-NET+) have not been decided upon yet, especially as Horizon2020 instrument are not known yet. It will be up to the JPI Management Board to decide, but no options are excluded at this stage;
- Infrastructure building on the ERA-NET outputs, the JPI Oceans is willing to contribute to the development of the European Ocean Observing System (EOOS);
- Data
- Communication and visibility.

Questions and Answers:

Participants highlighted:

- the steady progress of SEAS-ERA as well as the need for both time to efficiently complete its activities and compliance with the initial Work Programme;
- the SEAS-ERA and marine and environmental ERA-NETs represent a great opportunity for the JPI in paving the way to further cooperation in the marine and maritime realm.

4. Marine research funding in Europe: European Commission perspectives

Arnoldas Milukas (European Commission, DG RTD) gave an overview of past marine research funding by the European Commission and presented preliminary elements of Horizon 2020, the Common Strategic Framework for EU Research and Innovation funding (see Annex V).

He indicated that Horizon 2020 societal challenges were fixed but he also stressed that topics to be included within those challenges are still to be defined.

Kathrine Angell-Hansen (research Council Norway; JPI Oceans) stressed that marine field is cross cutting by nature and recommended that oceans research should be supported with a dedicated structure within the European Commission.

5. A European Marine and Maritime Science Partnership

Adi Kellermann (ICES; MARCOM+ Coordinator) gave a presentation on the current status of the FP7 CSA project, MARCOM+ (see Annex VI).

MARCOM+

MARCOM+ is testing mechanisms for the establishment of a future European Marine and Maritime Science Partnership which could:

- 1. Establish a long-term and sustainable platform, based on shared interests and shared ownership and leadership, supporting the implementation of the European Strategy for Marine and Maritime Research (EC, 2008).
- 2. Bring added value to funded research at the European level by facilitating improved collaboration between marine and maritime science communities (identify opportunities, etc.)
- 3. Provide a node for effective interactions between the marine and maritime science communities and broader stakeholders group (Member States, regional authorities, industry and civil society)

See www.marinemaritimescienceforum.eu

Answering a question from the audience, **Adi Kellermann** stated that the potential relations between MARCOM+ and JPI Oceans were still to be clarified but however he could see the JPI Oceans as a potential future client for the European Marine and Maritime Science Partnership.

Kathrine Angell-Hansen stressed that the MARCOM+ community has brought together a broad range of important partners, thus being a highly valuable and efficient way for JPI Oceans to interact with stakeholders. This being said, JPI Oceans needs to have an open approach, thus it will not give any specific stakeholder group the monopoly to interact with the JPI.

6. Flash presentations from related marine or environmental ERA-NETs

MariFish Legacy

John Lock (DEFRA, UK) introduced the final MariFish report which summarises the work undertaken during the life of the project, including how the partnership was developed, and how MariFish has put collaboration into practice (See Annex VII).

MariFish

Coordination of European Marine Fisheries Research Programmes

"Strengthening the links between European marine fisheries science and fisheries management"

See: www.marifish.net

Links from MariFish through to SEAS-ERA:

- Several MariFish partners are involved in SEAS-ERA;
- Opportunity to build on programme and project databases;

- Experience gained through MariFish in developing collaborative programmes (without additional funds) will be taken forward in SEAS-ERA through its Task 2.2 "Guidance on how to develop collaborative programmes", including a dedicated workshop;
- Experience gained on how to improve science/policy communication, and the important role that 'knowledge management' can play.

BiodivERsA 2

Frédéric Lemaitre (FRB, France) presented the achievements of five years of cooperation through BiodivERsA phase 1 as well as the new ambitions of the consortium through its phase 2 (see Annex VIII).

BiodivERsA 2

BiodivERsA 2 is a network of national funding organisations promoting pan-European research that offers innovative opportunities for conservation and sustainable management of biodiversity.

See: www.biodiversa.org

CIRCLE 2

Wouter Vanneuville (Flemish Government – MOW, Belgium) presented CIRCLE 2. He stressed that CIRCLE 2 partners are willing to complement and not compete on with respect to related climate change activities. He launched a clear call for joint actions (see Annex IX).

CIRCLE 2

CIRCLE 2 is committed to fund research and share knowledge on climate adaptation and the promotion of long-term cooperation among national and regional climate change programmes.

See www.circle-era.eu

MARINEBIOTECH

Steinar Bergseth (RCN, Norway) presented the chronology of events/initiatives which led to the MARINEBIOTECH project, as well as the structure and objectives of the project (see Annex X).

MARINEBIOTECH CSA

MARINEBIOTECH CSA will mobilise funding agencies and other stakeholders to participate in a future ERA-NET with the critical mass needed to fund trans-European R&D projects of high quality within Marine Biotechnology

Website under construction

Black Sea ERA-NET

Serban Panaitescu (UEFISCDI, Romania) presented the Black Sea ERA-NET (see Annex XI).

Black Sea ERA-NET

BS-ERA-NET is a networking project aimed at integrating the participating countries from the Black Sea extended region in the European Research Area by linking research activities within existing national, bilateral and regional RTD programmes.

See www.bs-era.net

Questions and Answers

From the exchange which followed the flash presentations, it could be concluded that:

- Marine and environmental ERA-NETs still deal with their commonalities on an ad hoc basis;
- ERA-NET subjects and partnerships often overlap and in many instances no overall national approach is defined to address that matter. The latter leads to:
 - o the individual agencies having to prioritise and conduct a fair assessment of capabilities (human and financial resources),
 - Research Performing Organisations being drawn into the process,
 - Expectations *vis à vis* the JPI to provide advice or rationalisation re. the involvement in numerous ERA-NETs;
- A standard approach to engage with the policy customers still needs to be defined based on the differentiation between the need to address big science questions (Research Councils) and the need to produce evidence in support to policy implementation (Ministries);
- It is important to strengthen the links between Research Funding Organisation and Research performing Organisations.

7. Concrete synergies between SEAS-ERA and JPI, and other marine or environmental ERA-NETs

A panel composed of **Joan Albaiges**, **Rudy Herman**, **Kathrine Angell Hansen** and facilitated by **Niall McDonough** opened the discussion with the participants on numerous topics (e.g. Joint Calls, Infrastructure, Knowledge Transfer, Capacity Building, etc.). The discussion touched upon cooperation amongst ERA-NETs and also cooperation between the JPI and the ERA-NETs.

7.1. Cooperation between ERA-NETs (inter ERA-NETs synergies)

Suggestions to best address existing topical and operational overlaps between ERA-NETs include:

Better use of the ERA LEARN platform. The latter is based on a comprehensive analysis
of existing and already validated procedures and facilitates the identification of tools
that are suitable for a broad use (e.g. Manual & tools for call implementation "Everything you need to launch and implement a joint call"; Tools for internal review of
ERA-NET participation - "How to position ERA-NET participation in your organisation")

http://netwatch.jrc.ec.europa.eu/nw/index.cfm/static/eralearn/eralearn.html;

- Creation of a self sustained network to share information amongst environmental ERA-NETs on tested methodologies (MoUs for Joint Calls with fresh money, for Common Programmes without fresh money, etc.) and also on ERA-NETs activities (e.g. Open calls for proposals);
- Revival of the EC network of environmental ERA-NETs;
- Strengthening the interaction with the initiatives dealing with knowledge transfer issues in the marine sector (e.g. Marine TT, KIMERAA, etc.) to meet the objectives of Horizon 2020.

On the identification and selection of priorities for ERA-NET activities (e.g. joint calls or common programmes):

- The selection can occur between either identified commonalities between national priorities and programmes or clear gaps and topics unlikely to receive substantial support/attention at the national level (use ERA-NET as a vehicle to address that aspect)
- Some ERA-NETs (e.g. CIRCLE 2) support the selection of common research priorities only
 for their activities in order to ensure a higher rate of success in subsequently
 establishing a self sustained network;
- Other ERA-NETs (e.g. MariFish) adopted an opposite approach and put the emphasis on gaps and topics lacking national visibility. Such an approach is based on the idea that mainstream topics would get funded anyway through standard channels;
- A mixed approach could be defined and based on (i) the networking of existing projects around commonalities and (ii) the launch of joint calls to address identified gaps;
- Each consortium is free to make the choice most appropriate to best address its specificities.

7.2. Cooperation between the ERA-NETs and the JPI Oceans

JPI Oceans will be initiated on a long term perspective and will build on ERA-NETs (sort of "laboratories" for the JPI), on Technology Platforms, etc. to provide an umbrella and to address gaps and launch activities only where there is a clear added value.

Joan Albaiges emphasised that the JPI will not be a sum of ERA-NET activities, but an instrument to address cross-cutting issues, foster specific cooperation initiatives among countries, and promote the interaction with stakeholders.

Additional expectations vis à vis the JPI were expressed - The JPI could:

- Advance marine science **Rudy Hermann** stressed the three pillars of the JPI Oceans: Science, Policy and Innovation;
- Trigger the realisation of the importance of the Seas and Oceans;
- Offer new tools (funding, managing, etc.) Rudy Hermann highlighted such matter may be considered once the Horizon 2020 tools would be made public;
- Allow the transfer of responsibilities from member states authorities and structures;
- Accommodate different perspectives: national, regional and European Kathrine Angell
 Hansen reminded that the JPI would adopt a variable geometry approach, striving to
 think global and act local.

The question of the legitimacy of the JPI Oceans was also raised, especially with reference to themes (such as biodiversity) which fall under the remit of numerous JPIs. The need to avoid the risk of addressing biodiversity issues in a non-coordinated way was acknowledged.

Kathrine Angell Hansen called for a concerted effort of the environmental ERA-NETs and JPI Oceans to influence Horizon 2020.

It was suggested that the JPI Oceans website should advertise ERA-NET open calls for proposals together with other relevant funding opportunities for marine research. Such suggestion was welcomed by the Forum participants.

Niall McDonough summarized the Forum discussions as follows:

- Useful updates were presented on different related initiatives;
- Crucial issues where flagged some of which will be brought to the attention of the JPI Management Board;
- The need for improved communication amongst marine and environmental ERA-NETs, at the very least amongst their coordinators, was identified.

Closing the Forum, **Niall McDonough** invited the participants to share the outputs of Forum discussions with the wider stakeholders' community and stressed that this SEAS-ERA Forum was only the first of the series.

Annexes

Annex I - 1st SEAS-ERA Strategic Forum agenda, final

Annex II - 1st SEAS-ERA Strategic Forum list of participants, final

Annex III - SEAS-ERA, Joan Albaiges

Annex IV - JPI "Healthy and Productive Seas and Oceans", Rudy Herman

Annex V - Marine research funding in Europe: European Commission perspectives, Arnoldas Milukas

Annex VI - A European Marine and Maritime Science Partnership, Adi Kellermann

Annex VII - MariFish Legacy, John Lock

Annex VIII - BiodivERsA 2, Frédéric Lemaitre

Annex IX - CIRCLE 2, Wouter Vanneuville

Annex X - MARINEBIOTECH CSA, Steinar Bergseth

Annex XI - Black Sea ERA-NET, Serban Panaitescu

Annex I – 1st SEAS-ERA Strategic Forum agenda, final

9.30 ARRIVAL AND COFFEE & TEA

10.00 BEGINNING OF THE FORUM

- 1. Welcome Niall McDonough (Marine Board-ESF; SEAS-ERA WP1 leader), 10'
- 2. SEAS-ERA: objectives, progress to date and suggestions for synergies with JPI Joan Albaiges (MICINN, Spain; SEAS-ERA Coordinator), 25' + 10' Q&A
- 3. JPI "Healthy and Productive Seas and Oceans": objectives, progress to date and suggestions for synergies with SEAS-ERA Rudy Herman (Flemish Government EWI, Belgium), 25' + 10' Q&A
- **4.** Marine research funding in Europe: European Commission perspectives Arnoldas Milukas (EC DG RTD), 25' + 10' Q&A
- A European Marine and Maritime Science Partnership Adi Kellermann (MARCOM+ Coordinator), 15' +10' Q&A

12.20 - 13.20 LUNCH

6. Flash presentations from related marine or environmental ERA-NETs

MariFish Legacy – John Lock (DEFRA, UK), 10'
BiodivERsA 2 – Frédéric Lemaitre (FRB, France), 10'
CIRCLE 2 – Wouter Vanneuville (Flemish Government – MOW, Belgium), 10'
MARINEBIOTECH – Steinar Bergseth (RCN, Norway), 10'
Black Sea ERA-NET - Serban Panaitescu (UEFISCDI, Romania), 10'
20' Q&A

14.30 - 15.00 COFFEE BREAK

7. Concrete synergies between SEAS-ERA and JPI, and other marine or environmental ERA-NETs Panel: Joan Albaiges, Rudy Herman, Kathrine Angell Hansen, Niall McDonough (facilitator)

Open discussion on Joint Calls, Infrastructure, Knowledge Transfer, Capacity Building, etc.

16.30 END OF THE FORUM

Annex II - 1st SEAS-ERA Strategic Forum list of participants, final

Annex III - SEAS-ERA, Joan Albaiges

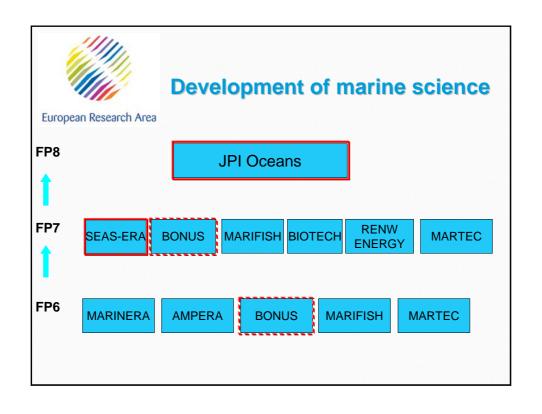

Objectives, progress to date and potential synergies with JPI - Oceans

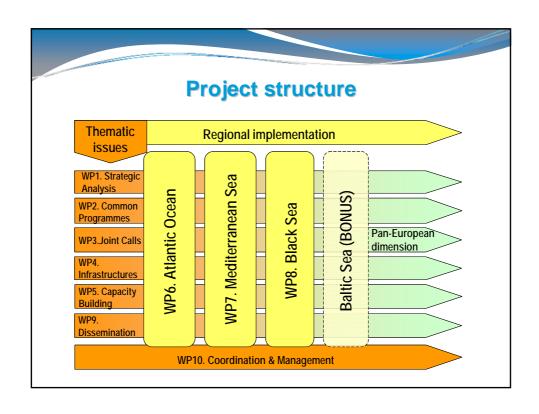

Targeted objectives

- Fostering cooperation/integration between marine research funding agencies, thereby developing a stable European overarching operational structure for marine research.
- Developing and implementing common research strategies and programmes related to the European sea basins to enhance European coherence in developing and implementing globally important marine research.
- Building up a coherent vision of the planning and use of research infrastructures, in line with the actions undertaken within the Capacity Programme (ESFRI opportunity list).

Main objectives - 1

☐ Mapping of existing national/regional research programmes and related strategic priorities, thus contributing to setting up a European Marine and Maritime Research Agenda.

Strategic analysis

Task 1.1 – Inventory and Analysis of existing Plans and Strategies

CONTENT

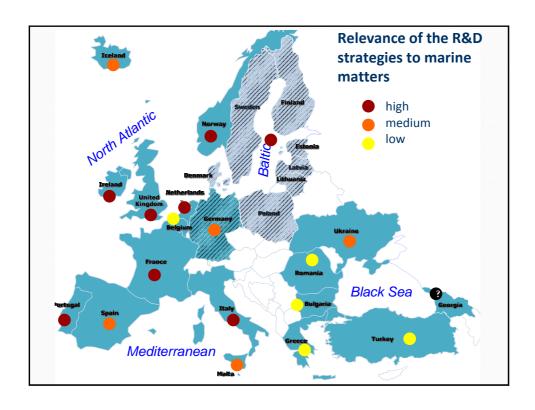

- Research strategies blueprint or concept for a specific goal: a strategy is flexible and open for adaptation if needed;
- Research plans an arrangement or a scheme for a specific goal: a plan is concrete and operational;
- Coherent set of Research priorities.

QUESTIONNAIRE STRUCTURE

- General information on the Science and Technology Strategy
- Scientific focus: 11 overall themes and associated list of topics
- Strategic Importance of Science Support Mechanisms: 6 categories and associated list of topics

RELEVANCE TO MARINE - MARITIME S&T

- **High** strategy is entirely dedicated to marine and maritime matters
- Medium strategy encompasses a section on marine and maritime matters
- Low strategy does not refer explicitly to marine and maritime matters

Scientific themes

- A series of 11 scientific themes was at the core of the questionnaire:
 - 1. Understanding the oceans
 - 2. Climate Change and the Marine Environment
 - 3. Ocean Technologies
 - 4. Energy
 - 5. Food
 - 6. Oceans and Health (Human)
 - 7. Safe and sustainable use of marine and coastal spaces
 - 8. New frontiers
 - 9. Maritime transport
 - 10. Socio-Economic and Legal Research
 - 11. Policy Support (Governance and Regulation)
- Each theme's importance in reference to the R&D was assessed:

High

Medium •

Low

| Scientific themes – | | | |
|--|---------------------|---------------------------|-----------|
| Scientific themes – | results Atlantic | Northern Mediterranean | Black Sea |
| 1. Understanding the oceans | | | |
| 2. Climate Change and the Marine Environment | | | |
| 3. Ocean Technologies | | | |
| 4. Energy | | | |
| 5. Food | | | |
| 6. Oceans and Health (Human) | | | |
| 7. Safe and sustainable use of marine spaces | | | |
| 8. New frontiers | | | |
| 9. Maritime transport | | | |
| 10. Socio-Economic and Legal Research | | | |
| 11. Policy Support (Governance and Regulation) | | | |

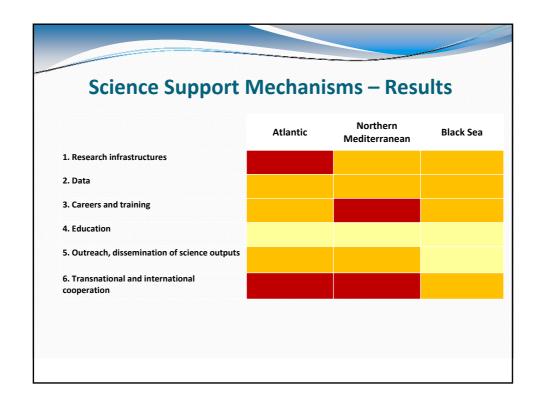

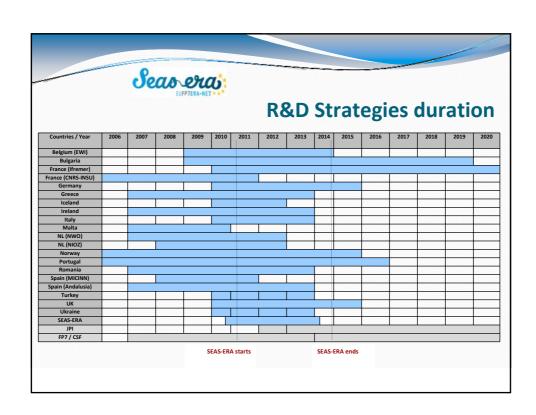

Science Support Mechanisms

Low

- A series of 6 scientific themes was at the core of the questionnaire:
 - 1. Research infrastructures
 - 2. Data
 - 3. Careers and training
 - 4. Education
 - 5. Outreach, dissemination of science outputs
 - 6. Transnational and international cooperation
- Each mechanism's importance in reference to the R&D strategy was assessed:

High ● Medium ●

Task 1.2 - Regional Strategic Research Agendas

Strategic Regional Research Vision Statement

Background and Rationale – Assessment of the critical regional issues, challenges and opportunities (responding to needs of governance/policy, management, environmental, scientific)

High-level SRA objectives

Research Priorities (core of SRA)

following the thematic headings used for the EurOCEAN 2010 Conference:

Basic Research & Fundamental Understanding (e.g. climate change)

Science supporting Society & Economy (e.g. blue biotech, marine renewable energy, transport, etc.)

New frontiers Research (e.g. Deep Sea)

Research Support (e.g. infrastructures dealt with in other tasks)

High-level roadmap

Strategic Analysis in the Atlantic Region

Principles / Drivers

- $\bullet {\sf Economic\ Recovery,\ Competitiveness\ and\ Sustainable\ Socio-Economic\ Development} ; \\$
- •Environmental Protection & Climate Change;
- •Good Governance:
- •Basic and Applied Knowledge.

Basic Research: Understanding the Global and Ocean Ecosystem

- 1.The Deep Ocean Frontier;
- 2.Climate Change mitigation and adaptation ;
- 3.Ecosystem functioning and processes;

4.+++

Applied Research: Supporting sectoral economic development (Opportunities)

- 5.Renewable Ocean Energy;
- 6.Shipping and Maritime Transport;
- 7. Maritime Safety, Security & Surveillance;
- 8. Marine Leisure and Tourism;
- 9.Marine-BioResources and the Seafood Sector;
- 10.Hi-tech Marine Products & Services;
- 11.Blue Biotechnology: Harnessing Industrial Value of Sustainable Marine Biomaterials;
- 12.Oil and Gas Resources.

Research support & Cross-Cutting Issues:

- 13.Data Management and Dissemination;
- 14.Enabling Infrastructures
- 15.Marine Socio-Economic Capacity building and Assessments.
- 16.++++

Stakeholder Consultative Workshops: 2011 – 2012.

WS1: Member State Research Funding Organisation Workshop •BONUS + Atlantic Network

WS2: European Atlantic Basin Research Community Workshop

•Atlantic Network + invited representative groups and large projects

WS3: European Marine Stakeholders Workshop

•Atlantic Network + wider Stakeholder Community

WS4: East - Meets - West Workshop

•Atlantic Network + USA/Canada

Strategic Analysis in the Mediterranean Region

Agreed process & roadmap

- End 2010: Strategic analysis workshop (stakeholders)
 - Analysis of inventory
 - Preliminary identification of research topics of common interest
 - Agree on basic components of the SRA
 - · Decide & plan the process of the SRA
- 2011: work of an expert group (20) to develop the SRA and detail research priorities
 - 1-2 meetings of a core group
- End 2011: Workshop to agree on draft SRA

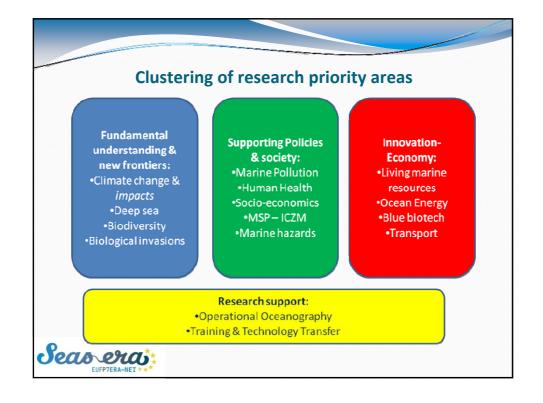

Overarching concepts for SRA:

- •From Knowledge to Innovation
- •Ecosystem approach

Priority topics for the Med:

- Climate change and impacts
- •Deep Sea Ecosystems
- •Living marine resources
- Biodiversity and conservation biology
- •Biological invasions
- Marine pollution
- •Ocean & Health
- •Socioeconomics & policies
- •MSP & ICZM
- •Marine Hazards
- Ocean Energy
- Marine biotechnology
- •Maritime transport & marine environment
- Operational oceanography

Main objectives - 2

□ Foster synergies at national and regional level, mobilising competitive and non-competitive funds for research in a more coordinated way, through common programs and joint calls, so as to reach a critical mass to address major cross-thematic marine and maritime research challenges.

Joint research activities

WP 2 – Common programmes

A step by step approach:

- 1. Specification by the funding agencies of their requirements and priorities for research
- 2. Identification of existing and planned programmes for the next four years by the different national institutes nominated by the Seas-Era members
- 3. Develop conceptual, innovative and integrative approaches
- 4. Building with the RPO a common, comprehensive and multinational programme to increase cooperation, to join efforts, to fill the main gaps based on the priorities of partners and the available opportunities to collaborate.

WP 3 - Joint Calls

Task 3.1 - General guidelines and procedures

- Background documents for the implementation of calls.
- MoUs: establish all the operational procedures:
 - > Funding model, Joint Management Committee, themes, dissemination, submission and evaluation procedures, funding procedures and follow up of the projects
- Development of web tools

Task 3.2 - Definition of priorities and launching the calls

- Atlantic: months 18 & 36
- Mediterranean: month 20
- Black Sea: month 30
- Pan-European: months 18 & 36

Task 3.3 - Follow-up and assessment of outcomes

- Final reports of the supported projects.
- Dedicated workshop, as a contribution to the Strategic Forum organized in WP 1.
- Recommendations for follow-up activities (months 46 & 48)

Road-map

Strategic planning

Setting up a European Marine and Maritime Research Agenda: 2011 – 2012

Joint research activities

Joint calls and common programs, mobilising competitive and non-competitive funds: 2012 - 2014

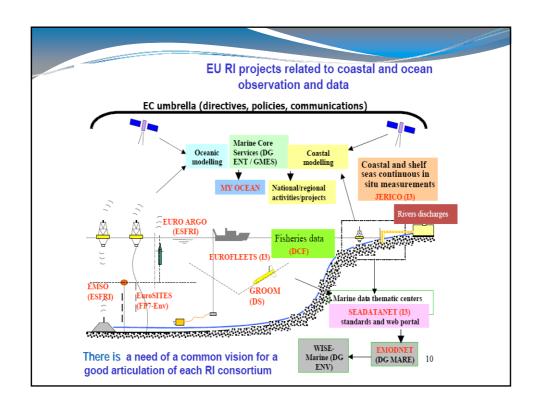

Main objectives - 3

☐ Propose a plan for a **better and sustainable use of the existing Marine Research Infrastructures**,
developing a common vision, e.g. a strategy for
marine infrastructure research among the Member
States and other countries, fostering technological
development to improve MRIs quality and service.

Infrastructures plan

- ➤ The marine RI landscape has evolved quickly over the last 4-5 years, mostly at the instigation of FP7 tools and other EU initiatives in connection with ESFRI, Integrated Maritime Policy, GMES, Directives, ...
 - > Research vessels and their underwater vehicles: for sea access and deep sea exploration/sampling.
 - In situ data acquisition systems: for seawater/seabed monitoring and observation.
 - Satellites: remote sensing for sea-surface monitoring.
 - ➤ Marine data centres: for data validation, storage and dissemination through web portals, incl. access to high computing facilities & generic modelling.
 - ➤ Marine land-based facilities for engineering: deep wave basins, water circulation canals, hyperbaric tanks, material behaviour in sea water testing laboratories, marine sensors calibration laboratories.
 - > Experimental facilities for biology and ecosystem studies: marine genomics, blue biotechnology, aquaculture, mesocosms.

EurDCEAN

Ostend Declaration

The European maritime and maritime research community stands ready to provide knowledge, services and support to the European Union and its Member and Associated States, recognising that

"The Seas and Oceans are one of the Grand Challenges for the 21st Century".

in doing to, we acknowledge

- the critical role of the oceans in the earth and climate systems;
- the emportance of coasts, seel and ocean are their ecosystems to our nearm and well-being.
 the increasing impacts of global environmental change on the marine environment and the
- the ongoing need for basic research to address major gaps in our fundamental knowledge of coasts, seas and oceans;
 the enormous opportunities for knowstion, sustained wealth and job creation in new and existing maritime sectors such a
- aquaculture, renewable energy, marine biotechnology and maritime transp

Furthermore, we underline the crucial role of marine and maritime science and technology in providing knowledge and understanding of the seas and oceans and their biodiversity in creating new opportunities and technologies which will support and progress:

- job creation through smart, sustainable and inclusive growth (Europe 20)
- implementation of the integrated Maritane Policy for the European Union (2007), the European Research Area (EC Green Paper on ERA, 2007) and other policies such as the Common Fisheries Policy;
- Good Environmental Status in our marine waters by 2020 (Marine Strategy Framework Directive); prerelated grand challenges including food, energy and health, as identified in the Lund Declaration (200).

is make and maritims session commonly accopyles that significant progress has been made in response to the Colleay (2001) and progress (2007) Declarations, ensistence for the significant for integrated Maritims Policy for (supper (2007), its environmental piller the progress of the significant session (2008) and the significant for the integrat Strategy for Marine and Maritims (second (2008), and commits to select the second second significant second se

Addressing the Seas and Oceans Grand Challenge

The InVCOAN 2010 Conference identified priority marks and mathine research deliberges and opportunities in rease such eslocal, global eminomental change, energy, nutries blocknickopy, matrities research and marks epital platnicie, skeldul, seabetid mipping. The Conference delivered an unequi-local message on the societal and economic benefits is unpo derives from the seas and oceans and of the crucial role that research and technology must play in addressing the Seas and Oceans Grand Challenge.

The European marine science and technology community, building on existing achievements and initiatives, is ready to address this challenge in partnership with industry and the public sector, and call upon the European Union and its Member an Associated States to facilitate this response by delivering the following proactive and integrating actions:

1. Joint Programmin

Join's York and arrange arming Develop an integriting framework, combining the assets of European programmes with those of Member States, to Develop and Challenge of the Seas and Ocean, including the Identification and celebrary of critical marker research inferentiveurs: The Joint Programming Inhibitor on "Healthy and Productive Seas and Ocean the papervise inferentiveurs: The Joint Programming Inhibitor on "Healthy and Productive Seas and Ocean the papervise the Programming of the Programming Inhibitor on "Healthy and Productive Seas and Ocean the papervise the Programming of the Programming Inhibitor on The Inhibitor Seas and Ocean The Inhibitor and Inhibitor Inh

- ➤ A common strategic vision for the RI development and coordination / integration at EU level, covering all the marine sciences, can be put forward to:
 - · Avoid fragmentation and overlaps,
 - · Optimize the procurement, the use, the access,
 - Build transnational governances,
- ➤ The ERA-Nets projects, with their RFOs partners, are intended to contribute to this approach: Seas-ERA proposes an activity of mapping, strategic vision and improvement proposals for a stable and successful European integration of the marine RI, in tune with the upcoming period 2014-2020.

Overall objective: to be ready by 2013 with a common strategic vision and a complete set of propositions for the marine RI

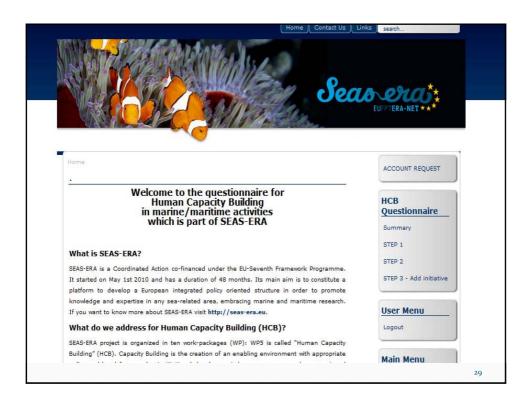

Main objectives - 4

☐ Reduce imbalances among regions through human capacity building.

To this end, the project will devote special attention to set-up a pan-European training and mobility strategy for human resources for the development of oceanrelated activities.

Regional development

FIRST LEVEL

General analysis:

- •Mapping of European initiatives on human capacity building
- •Highlight of best practices

Questionnaire analysis

SECOND LEVEL

Regional analysis:

- •Unbalances detected per sector and per country
- •Needs as expressed by regions, including non European countries

Main objectives - 5

- □ Enhance public awareness towards marine and maritime scientific and policy issues in Europe.
- SEAS-ERA will have a strong commitment to translate the RTD activities into social, economic and cultural benefits.
- SEAS-ERA will emphasise the role of science in marine and maritime policy. Overall, this will form a core element of the **dissemination strategy**.

The bases for a Communication Strategy

Which type(s) of dissemination we want to implement?

- ➤ For awareness (make user groups/audiences be aware of the work of the project
- ➤ For **understanding** (make user groups/audiences to understand the work of the project
- > For action (make user groups/audiences to adopt actions

The bases for a Communication Strategy

Which are the key target groups?

Identify the key stakeholders will be a critical task to allow the best interface and exchange advise with relevant players in different sectors of activity

Mobilization of Stakeholders

- Creating eventually a database of stakeholders?
- Organizing workshops?

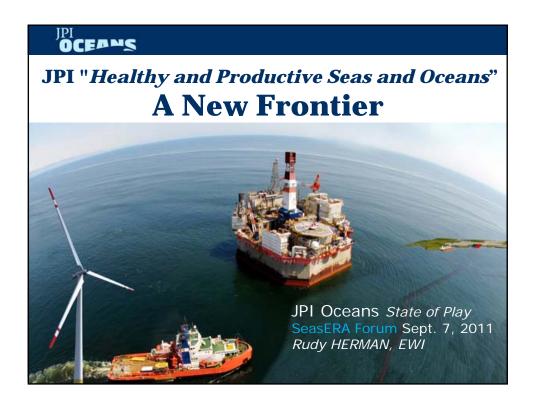

COMMUNICATION TOOLS

- Website (http://www.seas-era.eu/))
- •e-Newsletter
- Printed materials (poster, leaflet)
- Conference presentations
- Reports
- Workshops

Annex IV - JPI "Healthy and Productive Seas and Oceans", Rudy Herman

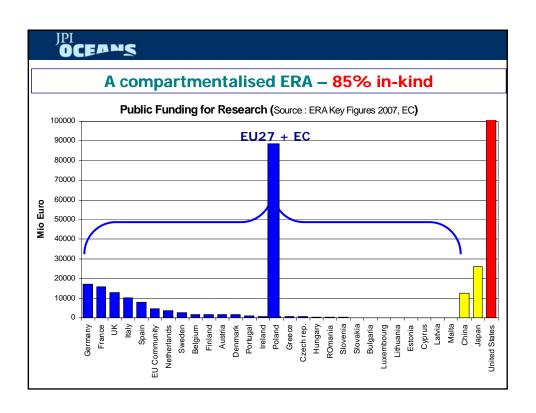

JPI OCEANS

JPI Oceans is Policy driven

- An Integrated Maritime Policy for the European Union (2007)
 - The Marine Strategy framework Directive, GES
 - Maximising the value of the maritime economy
 - Com 534(2008) EU Marine and Maritime Research Strategy
- EU 20-20 Objectives in particular the Flagship Initiatives:
 - Innovation Union
 - Resource efficient Europe

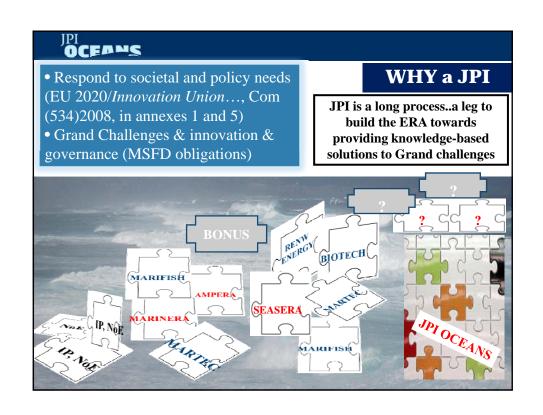

• EU 20-20-20 Energy

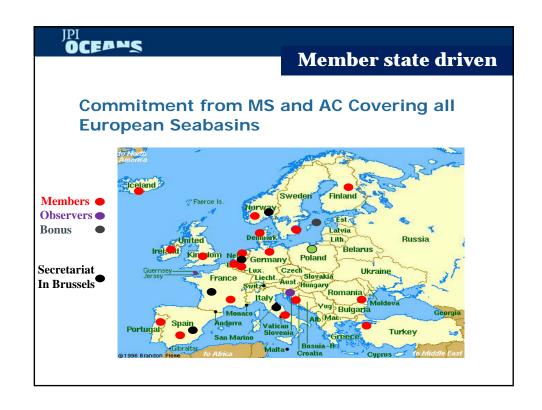

JPI OCEANS

- GPC May 6th Commission assessed JPI Oceans as mature recommendation September 2011
 - Commitments from MS / sufficient and cover all seabasins
 - Vision including
 - Mapping
 - ToR
 - Consult Investigate synergy with Other ERA actions: ERANETS, TECH. PLATFORMS, MARCOM, BONUS, EMARES
 - 1st Management board September 20th 2011
 - IMB to feed input from this meeting

OCEANS

JPI Oceans specificities

- Long term perspective & capacity building
- •High-level commitment –MS driven
- Different typologies of actions, EOOS, KIC
- *~Innovation*, In-kind, funds, networks ~ Horizon2020
- Variable geometry (global approach vs local solutions)
- Stakeholders participation (*multi-sectorial*)
- Science to policy mechanism
- Common strategic agenda
- Visibility

OCEANS

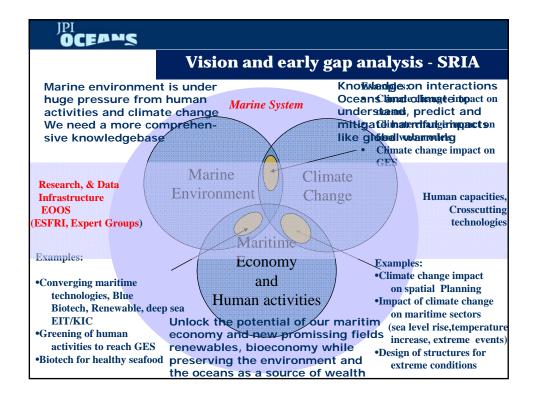

Science to policy mechanism why

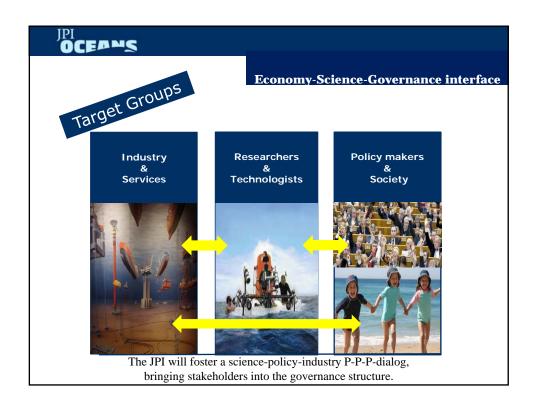

- No pan-European mechanism
- Long-term mechanism
- Regional specificities (cover all seabasins)
- Build on what we already have (regional conventions, ICES, BONUS, ERANETs, SEASERA..)
- High-level visibility and commitment
- High-level commitment implies we can optimise resources incl. in-kind (beyond ERANETs)

OCEANS

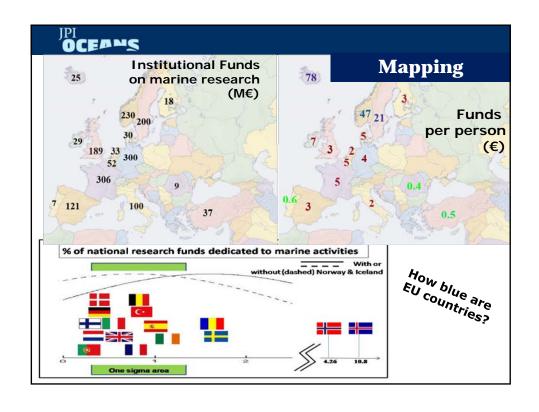

JPI Oceans - Goals

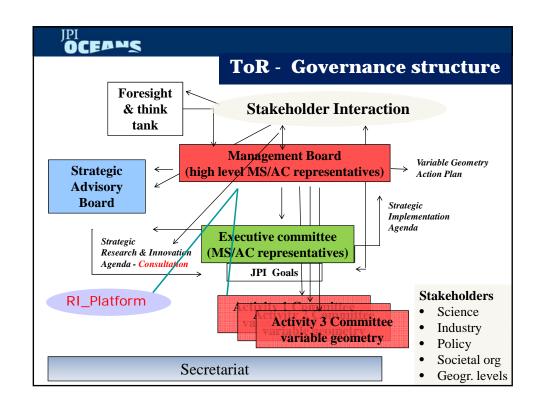

- •Enable the advent of a **knowledge based maritime economy, maximising its value** in a sustainable way
- **E**nsure **Good Environmental Status** of the seas and optimise planning of activities in the marine space
- •Optimise **mitigation of climate change impacts** on coastal areas

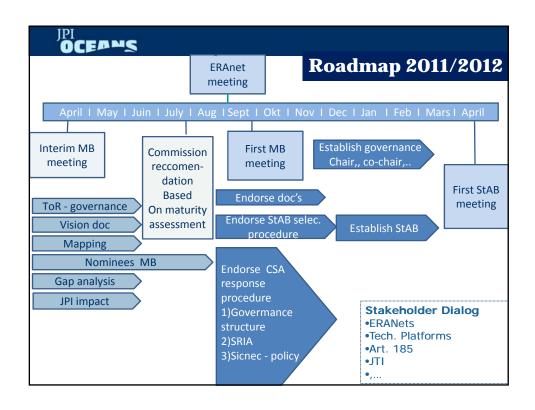

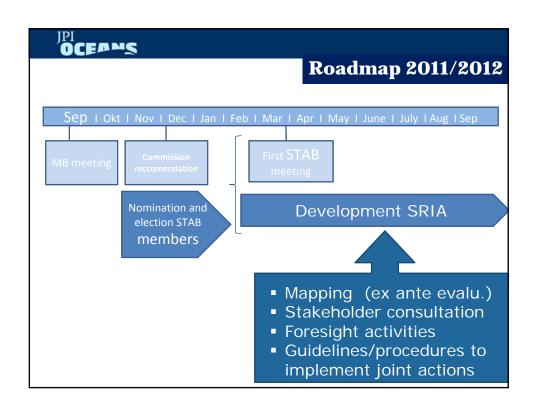

| OCEANS Drivers and Target Groups | | | | |
|-----------------------------------|--|--|---------------|-------------------|
| Area | Political driver | Economic and Societal driver | JPI Impact | TG1 TG2 TG3 |
| REWNEWABLE ENERGY | MSFD, GES | Legal obligation which needs long-term scientific monitoring/ data related to the identified 11 indicators and the integrated approach assupport to policy | High | TG3 |
| MARITIME SECTORS | Innovation Union, COM (2010) 546Integrated Maritime Policy COM (2007) 575 MSP in the EU, COM (2010) 771 | The increasing demand of the maritime space hampers the growth of maritime economies, as shipping, offshore energy, ports, fisheries, aquaculture and environmental concerns | Medium | TG1 TG3 |

OCEANS

Synergies and mutual benefits JPI / ERANETs / TPs

- Mapping avoid duplication and customer overkill
- JPI pilots gaps identified within or beyond the ERA-Nets
- Infrastructure ex. EOOS
- Data
- Communication and visibility

JPI OCEANS

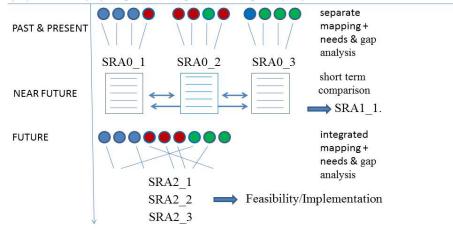

Questions, Comments and Observations

- What are your expections to the JPI?
- How do you see that we can play a common role?
- How can the JPI add value to your activities?
- Technology platforms work towards EU funding, not MS funding
- JPI Needs ERA-Nets and stakeholders scientific agendas
- JPI focus on cross-cutting issues and policy support in view of grand challenges
- We need to maintain all efforts in marine and maritime science
- In long term we might converge

The process to prepare the Strategic Research and Innovation Agenda to be evaluated for its feasibility and impact has to be built from past experiences: many projects/consortia/platforms prepared or are preparing their Strategic Research Agenda (SRA).

First, the overlap/synergies between the SRA from different projects/sectors will be analyzed. This procedure can miss an integrated strategic approach, which will be adopted in a second phase during the development of the CSA.

Annex V - Marine research funding in Europe: European Commission perspectives, Arnoldas Milukas

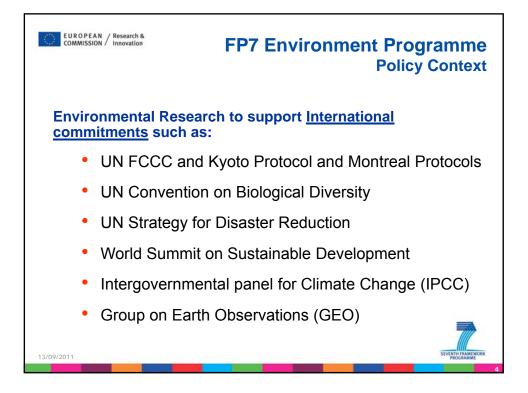

EUROPEAN / Research & COMMISSION / Innovation

EU Marine Research Brief history

- 1984: FP1 launched (1984-1989)
- 1989-1998: FP2, FP3 and FP4 with dedicated marine science and technology programmes MAST I, II & III
- 1998-2002: FP5 introduced the Key Action concept designed to deal with concrete problems through multi-disciplinary approaches involving all the interested parties

 – key action on "Sustainable marine Ecosystems"
- 2000: launching of the European Research Area initiative calling for better coordination and integration of research in the EU
- 2002-2006: FP6 became the financial instrument to implement ERA. Introduction of new tools such as the Integrated projects, Networks of excellence (e.g. SESAME, Hermes, EUR-Oceans, Marbef) and the ERA-net schemes (e.g. Marinera)
- 2006-2013: FP7 decision "special attention to cross-cutting priority areas such as marine science and technologies" - Adoption of the EU Strategy for Marine and Maritime Research (2008)
- 2014: Common Strategic Framework for Research and Innovation funding (FWP, CIP, EIT)

FP7 Environment Programme EUROPEAN / Research & COMMISSION / Innovation **Main Objectives:** Main Blocks of Activities: Sustainable management of the Climate Change, Pollution an Risks environment and its resources through Sustainable Management of Resources advancing our knowledge of the interactions between the climate, **Environmental Technologies** biosphere, ecosystems and human Earth Observation and Assessment Tools activities. and developing new technologies, tools and services, in order to address in an integrated way global environmental issues Challenge driven approach (WP 2012): Emphasis will be put on prediction of Coping with climate change climate, ecological, earth and ocean Sustainable use and management of land and systems changes, on tools and on seas technologies for monitoring, Improving resource efficiency prevention, mitigation of and adaptation Protecting citizens from environmental hazards to environmental pressures and risks Mobilizing environmental knowledge for policy, industry and society including on health, as well as for the sustainability of the natural and manmade environment. 13/09/2011

FP7 Environment Programme Policy Context (cont.)

Environmental Research to support EU policies such as:

- European Climate Change Programme II
- 6th Environmental Action Plan and associated Thematic Strategies (air, waste, marine protection, biodiversity, soil, pesticides, urban)
- Action Plans on Environmental Technologies and Environment and Health
- European directives Water Directive, Marine Strategy Framework Directive, REACH (chemicals), CAFE (air quality), INSPIRE (env. data)
- Integrated Maritime Policy for the Union ("The Blue Book"); EU Strategy for Marine and Maritime Research COM (2008) 534 final – science pillar of the Maritime Policy
- => recent key policy drivers Europe 2020 Strategy and related flag ship initiatives e.g.
 - ► Innovation Union research and innovation key drivers of competitiveness, jobs, sustainable growth and social progress

13/09/2011

EU Strategy for Marine & Maritime Research

Two major lines of action:

- A. Addressing complexity of oceans and sea
 - Capacity Building (e.g. building new research and observation infrastructures), innovation and education
 - Promoting Integration across marine and maritime research disciplines (e.g. Integrated projects);
 - Foster knowledge & technology transfer (e.g. dedicated support actions)
 - Promote synergies at national & regional level (e.g. through ERAnet, Article 185, JPI). It also has an international cooperation component because the problems related to the oceans have a global dimension.
- B. Proposal for new forms of governance in research
 - creation of a stable, open partnership, involving existing researchers networks, MS, policy-makers, industrial sectors and representatives from society.

FP7 Environment Programme Marine & Coastal Research Funded Activities 2007-2011

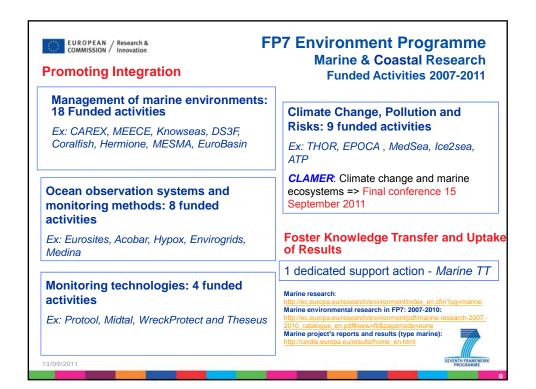

Capacity building - Marine Infrastructures

- Eurosites: Integration and enhancement of key existing European deepocean observatories
- ESONET (F6 Network of Excellence): European Sea Floor Observatory Network (related to EMSO - European multidisciplinary seafloor observation - funded under the capacities Programme - ESFRI Roadmap) - European Deep Sea Observatories at a turning point - There is a window of opportunity for the suggestion of a possible European Research Infrastructure (ERIC)

COUNCIL REGULATION (EC) No 723/2009 of 25 June 2009

http://ec.europa.eu/research/infrastructures/pdf/council_regulation_eric.pdf

FP7 Environment Programme Marine & Coastal Research Funded Activities 2007-2011

Promoting integration - Cross-thematic calls - Ocean of Tomorrow

- Special attention will be paid to priority scientific and technological areas which cut across themes, such as marine sciences and technologies.
- Pluridisciplinarity will be encouraged by joint cross-thematic approaches to research and technology subjects relevant to more than one theme.
- Such cross-thematic approaches will be implemented, among others, through the use of joint calls between themes where a research topic is clearly relevant to the activities under each of the respective themes,

=> recalled by the Maritime Policy Blue book and Action plan (Oct. 2007) and the Strategy for Marine/Maritime Research (Sep. 2008)

Ex: ECO2, ACCESS and Vectors

EC services involved: Theme 2 (KBBE), 5 (Energy), 6 (Environment), 7 (Transport), 8 (Socio-economics and Humanities), DG ENER

13/09/2011

FP7 Environment Programme Ocean 2012

Ocean 2012 Topics (coordinated topics - not joint call)

Publication date: 20 July 2011

Deadline: 20 October 2011 (one-stage topics and 1st stage of two-stage topics)

Focusing on research in support to the Marine Strategy Framework Directive

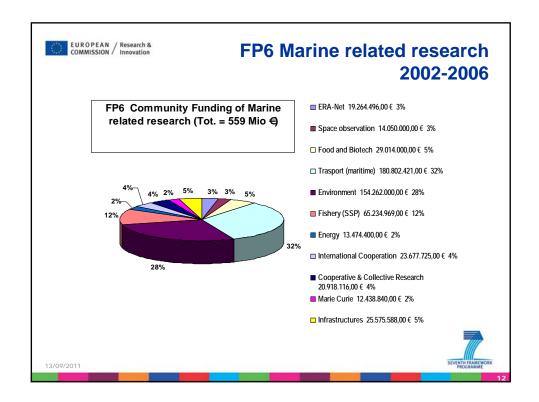

- •ENV.2012.6.2-3 Innovative tools for understanding and integrated assessment of Good Environmental Status (GES) of marine waters -two-stage
- •ENV.2012.6.2-4 Management and potential impacts of litter in the marine and coastal environment two-stage
- •ENV.2012.6.2-5 Improve scientific knowledge base to support the implementation of the Marine Strategy Framework Directive one-stage
- => Special attention will be given to the participation of SMEs

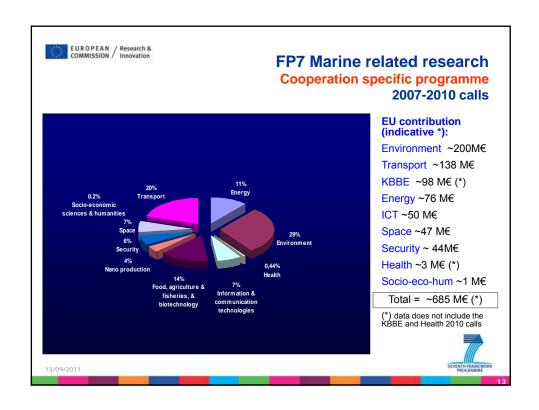

For information on "The Ocean of Tomorrow" related topics in other themes namely *Theme 2 (Fisheries), 5 (Energy), and 7 (Transport),* consult the corresponding work programme chapters! ATTENTION different call deadlines!

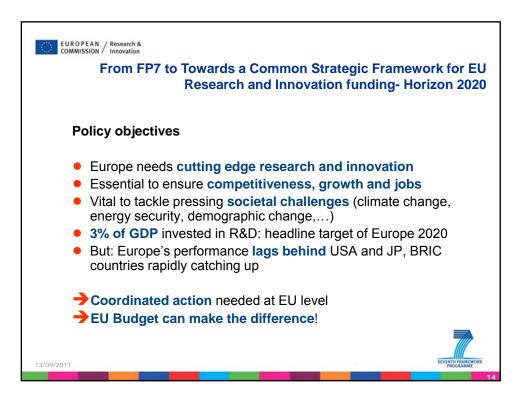

Env call website: http://ec.europa.eu/research/participants/portal/page/cooperation#env Infodays (June): http://ec.europa.eu/research/environment/index_en.cfm?pq=events

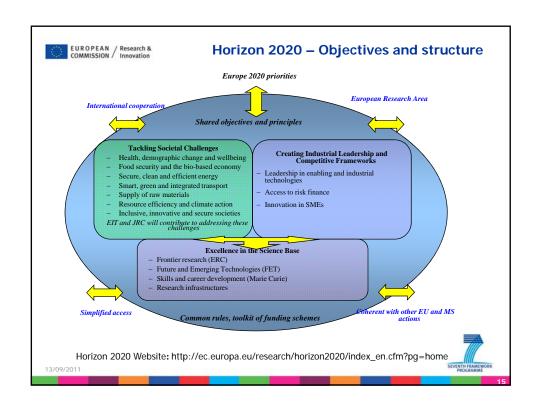

EUROPEAN / Research & COMMISSION / Innovation

From FP7 to Towards a Common Strategic Framework for EU Research and Innovation funding- Horizon 2020

Horizon 2020 - MFF Proposal

- MFF proposal adopted on 29 June 2011
- Overall amount for Horizon 2020 included (does not cover funding for ITER construction)
- Proposed amount: EUR 80 billion in constant 2011 prices (EUR 90 billion in current prices)
- 46% increase compared to current period (2007-2013)
- Share of research and innovation in EU Budget increases to 8.5% in 2020

SEVENTH FRAMEWORK PROGRAMME

13/09/2011

EUROPEAN / Research & Innovation

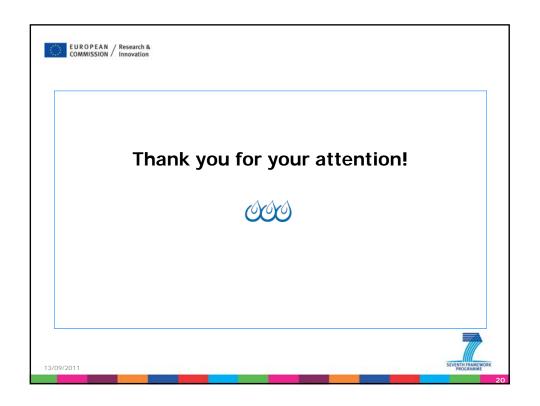

From FP7 to Towards a Common Strategic Framework for EU Research and Innovation funding- Horizon 2020

Horizon 2020 Key features

- Clear set of objectives based on Europe 2020 and Innovation Union
- Integrating research and innovation in a seamless programme
- Focus on overall policy priorities grand challenges
- Programme structured by objectives
- Simpler funding landscape for research and innovation with common rules and funding schemes

SEVENTH FRAMEWORK PROGRAMME

Annex VI - A European Marine and Maritime Science Partnership, Adi Kellermann

Why have a strategy for M/M Research, Technology and Innovation?

stimulation of innovativeness primary concern to secure Europe's position in the world,

Integrated Maritime Policy (IMP) calls for intensified cooperation between the marine and the maritime research communities in Europe to create synergies

conceptual framework also drawn from the environmental (marine) perspective,

Building a knowledge and innovation base on which to further develop,

Delivering the highest quality of life in coastal regions

1st SEAS-ERA Strategic Forum, 7 September 2011, Brussels

What's the goal?

The European Commission proposed support of a new governance model for M/M research that will take the form of a "Forum" and will advise the EC on policy making

A Forum bringing together a partnership sustainable over the long term, involving existing M/M research networks and key partners

An ambitious goal: who are the key partners? (1/2)

"The maritime research sector": a diverse community

- transport and distribution sectors (shipyards, shipping lines, equipment suppliers, installation facilities, ports),
- offshore operations: mineral extraction, oil & gas, mining (trace metals, sulphides),
- fisheries and aquaculture,
- biotechnology: "genetic mining"
- naval activities
- · touristic activities: cruise ships, sport boats
- · coastal engineering

1st SEAS-ERA Strategic Forum, 7 September 2011, Brussels

An ambitious goal: who are the key partners? (2/2)

"The marine research sector": another diverse community

- governmental research and universities
- applied science: fisheries and aquaculture management
- applied science: environmental impacts
- basic science: 'biodiversity' (from molecules to ecosystems)
- ocean physics, ocean chemistry and hydrology
- marine climatology
- marine geology
- · operational ocean monitoring

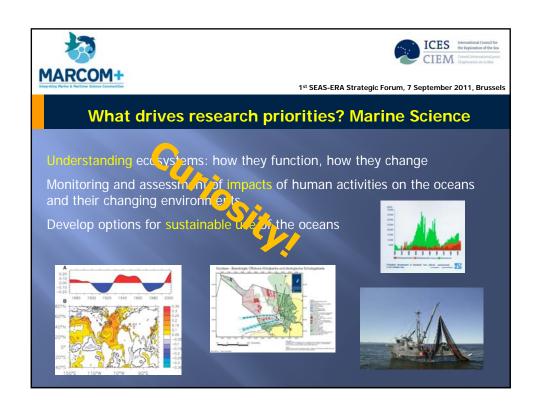

What drives research priorities? The maritime world

The maritime industry comprises diverse activities which potentially have effects on the marine environment

These activities imply research needs, because the goal is:

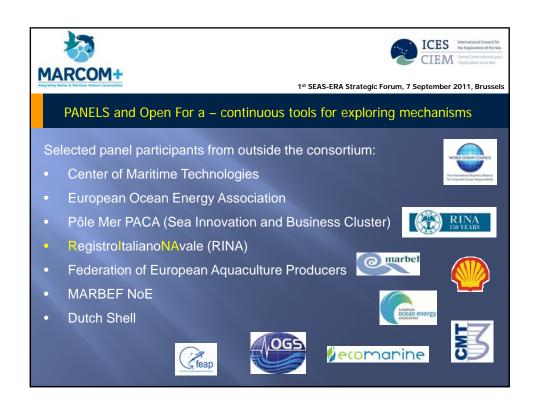

- to achieve competitiveness
- to run safe, sustainable and efficient operations
- to position the maritime industry to meet future challenges
- it is aiming at cost-efficiency, operating at short time scales (project) albeit with long term objectives

communities

Matrix of commonalities

Panel and Open Forum recommendations and conclusions

Actively seek cooperation with ongoing initiatives: ESFRI, EMBRC, JPI, SEAS-ERA etc.

"Areas of common interest" identified, to be refined

Mechanisms of joint investments between science and industry in research infrastructures to be identified and developed

Dialogue with the industry may facilitate long-term investments

1st SEAS-ERA Strategic Forum, 7 September 2011, Brussels

The MARCOM Forum – what future governance model?

Partnership coordination of activities: guiding principles

- openness of its membership
- consensus decisions
- transparency of its operations
- multi-disciplinarity of its activities
- ownership among the Forum members
- legitimacy, credibility and saliency of the science underpinning the advice

Annex VII - MariFish Legacy, John Lock

MariFish Legacy

Presentation to SEAS-ERA Strategic Forum 7th September 2011 John Lock, Co-ordinator

Strengthening the links between European marine fisheries science and fisheries management

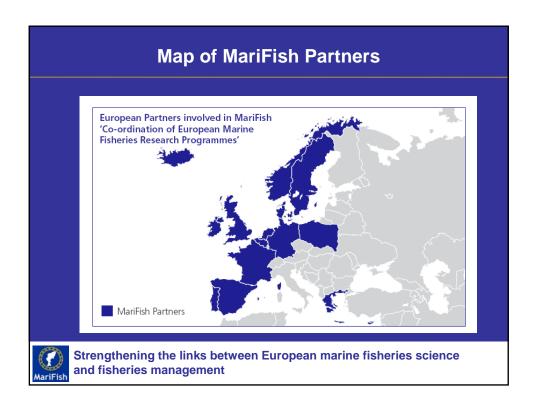

MariFish Final Report

This final report summarises the work undertaken during the life of the project, including how the partnership was developed, and how MariFish has put collaboration into practice.

The report is available to download at: http://www.marifish.net/publications/final.htm

The MariFish Partners

- Belgium: Agriculture and Fisheries
 Department/Institute for Agricultural and
 Fisheries Research.
- Cyprus: Research Promotion Foundation.
- Denmark: The Danish Food Industry Agency.
- **France:** French Research Institute for the Exploration of the Sea.
- **Germany:** Johann Heinrich von Thünen Institute Aquatic Resources.
- **Greece:** General Secretariat for Research and Technology, Ministry of Development.
- **Iceland:** The Icelandic Centre for Research.
- Ireland: Marine Institute.
- Netherlands: Ministry of Agriculture, Nature and Food Quality, Department of Fisheries.
- Norway: The Research Council of Norway.

- **Poland:** National Centre for Research and Development.
- Sea Fisheries Institute in Gdynia.
- **Portugal:** Ministry of Agriculture, Rural Development and Fisheries.
- Portuguese National Marine Fisheries and Aquaculture Research Institute and the National Institute of Biological Resources.
- Spain: The Ministry of Science and Innovation/Spanish Institute of Oceanography.
- Sweden: The Swedish Research Council for Environment, Agricultural Sciences and Spatial Planning.
- UK: The Scottish Ministers acting through Fisheries Research Services and Marine Scotland.
- Department for Environment, Food and Rural Affairs (Co-ordinator).

Objectives of the MariFish project (p 3 of the report)

At the outset of the project MariFish partners agreed to work on four key objectives to:

- **1.Build an effective partnership** between the funders of marine fisheries research and use the partnership to share experiences of identifying, commissioning and managing research;
- **2.Exchange information** on nationally funded research programmes and together identify areas of common interest, gaps and possible duplication;
- **3.Adopt a practical, direct approach to increasing co-operation and co-ordination** between partners by developing jointly-managed research programmes in five key areas; and
- **4.Develop a jointly-funded programme** to address strategic and innovative requirements for fisheries management.

Strengthening the links between European marine fisheries science and fisheries management

Objective 1: Building the partnership

(Chapter 2: pp 4-8 of the report)

How to build the partnership?

- Together, the ministries, research councils and research institutes making up the partnership invest € 190m annually in fisheries science.
- Some challenges facing fisheries science are at the local or national level, but many are common across Europe, and can best be tackled through collaboration - strong driver therefore to work together.
- MariFish partners, as funders of fisheries science, had a natural cohesiveness.
 Partners wanted to share experiences of commissioning and managing research, sharing research output, working collaboratively etc.
- The ERA_NET scheme provided the focus for partners to work together.

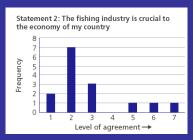

To help the partnership develop, and add interest, we also carried out studies including:

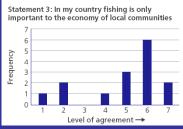

Study 1: the drivers for fisheries management – are they similar for all partners? Study 2: communication between science and policy - can we learn from each other?

Study 1: The drivers for fisheries management

- A survey was conducted to understand the important drivers and priorities for fisheries management.
- Fishery managers were asked to rank their level of agreement with 48 statements. Figure 3 in the report illustrates answers to four of the statements (pp.5).

Strengthening the links between European marine fisheries science and fisheries management

Study 2: The importance of communication

MariFish commissioned a study to help identify strengths and weaknesses of current communication practices, and ways in which this could be improved. The study focussed on two key questions:

- 1. How do fisheries managers communicate their need for evidence to the researchers and scientific advisers?
- 2. How do researchers and scientific advisers communicate the research results and advice back to fisheries managers and the wider audiences?

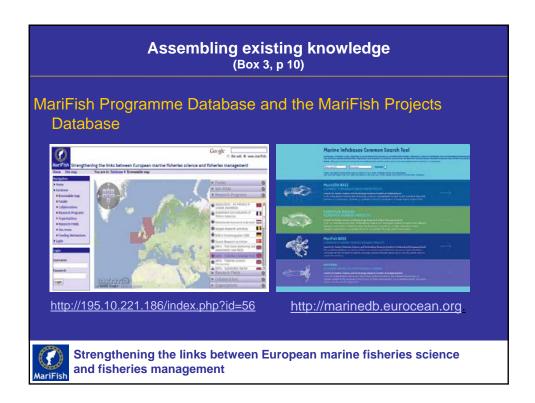

Figure 4: Enhancing communication between fishery managers and researchers Managers Managers

Objective 2: Exchanging information (Chapter 3: p. 9-15 of the report)

The second key objective set by the MariFish partners was to exchange information on nationally funded research programmes and identify areas of common interest, gaps and possible duplication. We also undertook three studies:

1.the importance of knowledge and its management;2.the role of socio-economics in fisheries management; and3.the role of other disciplines outside mainstream fisheries science.

Study 3: The importance of knowledge and its management

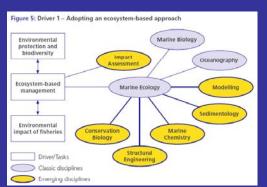

MariFish undertook a study of knowledge management to help ensure the greatest possible value is gained from the investment in knowledge made by the MariFish network (see Box 4, p 11)

- •How can we best cope with the exponential increase in information?
- •Do we use existing knowledge to best effect?
- •Have we invested sufficient time and resources in this area?

Study 5: The role of other disciplines outside mainstream fisheries science

MariFish study looked at five key policy drivers: adopting an ecosystem-based approach; waste reduction and new products; the need to assess stock status; maintaining a profitable fishing industry; and quality control of marine products (p 14,15).

The study **considered the scientific disciplines needed to help address these drivers** (see p.14-15).

Strengthening the links between European marine fisheries science and fisheries management

Objective 3: Collaborating without additional funds- approach

(Chapter 4. p 16-25 of the report)

The three step approach to collaboration:

- Step 1: **Detailed analysis of the MariFish National Research Programme Database** on existing research to identify candidate areas for collaboration.
- Step 2: **Establishing the future demands** for fisheries research through a dedicated symposium.
- Step 3: Mapping strategic areas against current research and selecting candidate topics for collaboration.

Each of these steps is expanded on the pages 17-19.

Objective 3: Collaborating without additional fundsfive Collaborative Programmes

At the end of this three step process, MariFish partners had established the broad topics for collaboration. Partners involved in each Collaborative Programme **signed a Memorandum of Understanding** that set out what would be achieved and how partners would work together.

Collaborative Programme 1: Management of fishing effort in the Channel

Collaborative Programme 2: Reduction of by-catch and discards Collaborative Programme 3: Essential fish habitats and trophic interactions in the Mediterranean

Collaborative Programme 4: Influence of climate on small pelagic fish

Collaborative Programme 5: Use of indicators to support an

Strengthening the links between European marine fisheries science and fisheries management

Objective 4: Collaborating through joint funding

(Chapter 5 p. 26-28 of the report)

Eight partners **committed a total of €5.7m to the 'common pot'** to jointly fund three research projects addressing the following topic:

The development of the concept of operational fisheries management indicators that can assist fisheries managers in developing long-term fisheries management plans, and exploring ways these indicators could be formulated by applying the concept on selected fisheries.

- Jointly Funded Project 1: By-catch and discards: management indicators, trends and location (BADMINTON)
- Jointly Funded Project 2: Developing fisheries management indicators and targets (DEFINEIT)
- Jointly Funded Project 3: Understanding recruitment processes using coupled models of the pelagic ecosystem (REPROdUCE)

Conclusions

- MariFish has demonstrated the positive benefits that can arise from European collaboration.
- The 18 partners working together delivered all the major outputs agreed at the start of the project.
- Collaboration developed through MariFish has set a firm foundation on which further collaboration can be built. It has stimulated valuable contacts between funders, managers and scientists which can help find solutions to the future challenges facing fisheries management.

Strengthening the links between European marine fisheries science and fisheries management

Conclusions (continued)

- The CFP reform and the MSFD will require greater collaboration at the regional level. Collaboration between the funders of fisheries science will therefore need to increase to respond to these challenges.
- MariFish has demonstrated how collaboration can take place in practice, and the benefits that can be realised.

The Future

- Certain initiatives started under MariFish will continue including the Collaborative Programmes and the jointlyfunded projects.
- Experience gained through MariFish will feed into SEAS-ERA, and into the proposed Joint Programming Initiative (JPI) 'Healthy and Productive Seas and Oceans'. Other options for continuing collaboration, such as bi-lateral agreements, may also emerge, again building on the achievements made under MariFish.

Strengthening the links between European marine fisheries science and fisheries management

Links from MariFish through to SEAS-ERA

- Several MariFish partners are in SEAS-ERA
- Opportunity to build on programme and project databases
- Experience gained through MariFish in developing collaborative programmes (without additional funds) will be taken forward in SEAS through WP2 Task 2.2 "Guidance on how to develop collaborative programmes", including a dedicated workshop.

BiodivERsA2: new ambitions

- Consolidate cooperation between agencies
- Integrate missing science communities, with special attention to new member states
- Address emerging issues and a changing landscape in the field of biodiversity research

More specifically:

- Establish a recurrent and well-identified funding scheme for transnational biodiversity research projects
- Identify topics and joint activities needed based on a common strategy => promoting research to unlock key scientific questions
- Play a role in the processes and interfaces to inform policy and users
- → Towards a sustainable research funding platform

2nd phase: first achievements

- Second joint call on Biodiversity and ecosystem services (2010-2011)
 - 7 funded projects (approx. 9 M€)
 - 2 themes: understanding interactions between biodiversity and ecosystem services, the valuation of biodiversity and ecosystem services

By project : 1 to 2 M€during 2-3 years

3 to 6 different countries

3 to 10 partners

- Mechanism for the identification of joint call priorities
- Development of a BiodivERsA rolling agenda
- Third joint call on Biodiversity dynamics: developing scenarios, identifying tipping points and improving resilience (under development)

BiodivERsA2: Sustainable funding

biodiversa

✓ Based on an in-depth analysis of international & national strategies, development of a common agenda → topics and joint activities needed to promote research and unlock key scientific questions over the next years

✓ Annual calls for proposals on key topics to support European biodiversity research

✓ A self-sustained mechanism to support European biodiversity research with recurrent joint activities

Priority group

- -Alien and native species
- Understanding the origin and loss of biodiversity
- Biodiversity dynamics: developing scenarios, identifying tipping points, and improving resilience

High interest group

- -Improvement of habitats connectivity, functioning green infrastructure, diversifying landscapes
- Biodiversity and climate change
- Management of conflicts between sectors and stakeholders and at various levels (legislative practice, management practice, legal rights issues, and limitations in management systems with regard to biodiversity)

Biodiversity research in JPIs: BiodivERsA's view (1/2)

Biodiversity is a recurrent issue in several existing or emerging JPIs

- Specific questions in biodiversity research emerge from JPIs on other themes
- · Risk of addressing biodiversity issues in a non-coordinated manner

Several questions arise:

- How to encourage and fund international biodiversity research?
- How to facilitate the international teaming up of scientists in the field and promote interdisciplinary research?
- How to keep a coherent vision for international biodiversity research and address pressing issues?

• ..

Biodiversity research in JPIs: BiodivERsA's view (2/2)

Two main routes can be identified:

- Develop a JPI dedicated to biodiversity research and natural resources
- Ensure that biodiversity research is adequately included in JPIs on other issues and that biodiversity research can be efficiently supported and integrated at a European scale in close connection to existing JPIs

Both approaches have merits and challenges, however, BiodivERsA is committed to:

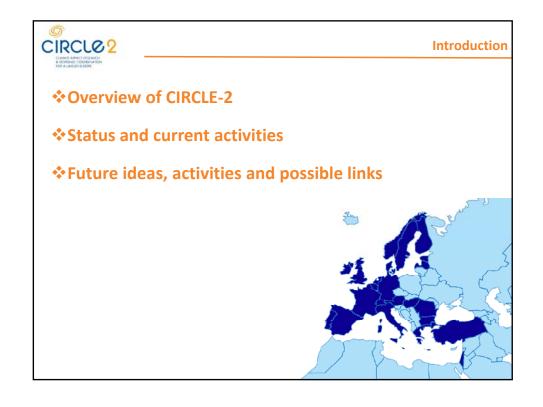

- Seek collaboration with existing JPIs
- Seek collaboration with other international initiatives concerned with biodiversity (such as EPBRS, IPBES, LifeWatch, GEO BON, ...)

biodiversa

 $\Rightarrow\,$ Thus, BiodivERsA will invite interested parties to a joint meeting to be organised in late 2011

Annex IX - CIRCLE 2, Wouter Vanneuville

What kind of Networks are we talking about?

The challenge: adapting to climate change

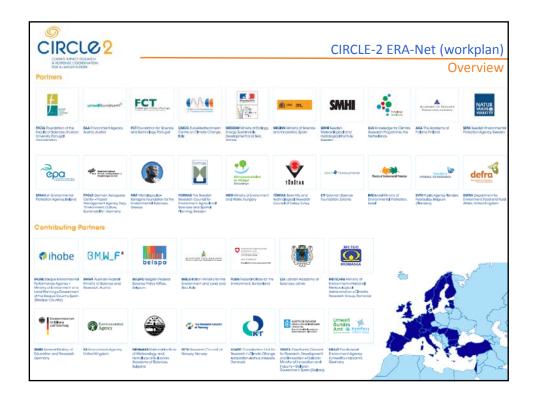

Regarding Climate Change adaptation where exactly does the ERA come into play and why is Europe in need of stronger scientific (and policy) networks?

Adaptation is a challenge for decision-making... and for research

Vision

will ...

- **❖** Coordinate European transnational research funding on Climate Change Impacts, Vulnerability and Adaptation (CCIVA)
- ❖ Facilitate the transfer of research outcomes that European and national decision makers need to design effective yet economically efficient Adaptation initiatives and strategies
- ❖ Share experiences and lessons learnt on CCIVA research funding and on the development of national and regional Adaptation practices
- **❖** Encourage international cooperation with non-European countries and organisations as well as the involvement of countries with less diverse CCIVA research programmes

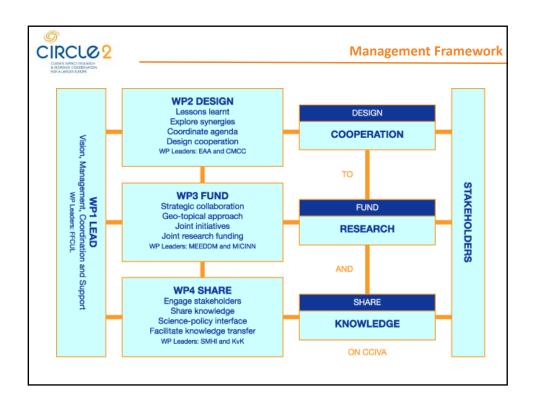

Build on the lessons learned / results of CIRCLE (1)

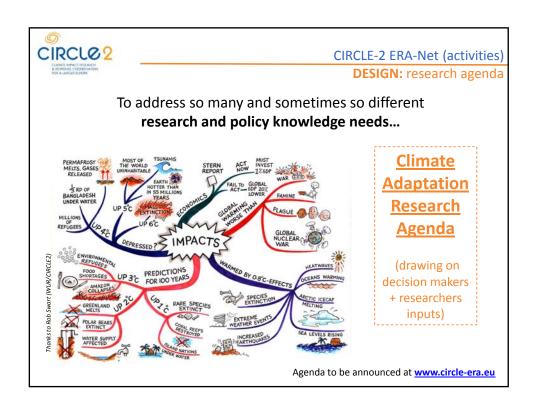

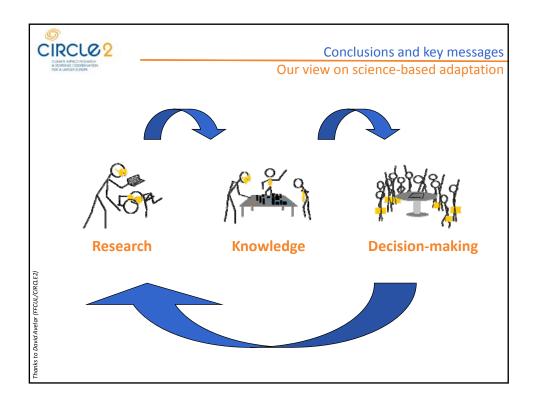

Objectives

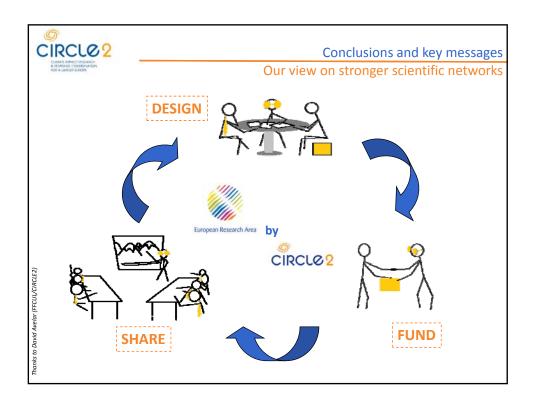

aims to ...

- **Establish a funding network** (that fosters responses to policy-relevant climate Adaptation questions)
- **Facilitate cooperation** (across European CCIVA research programmes and institutions)
- Promote the alignment (of national and regional climate Adaptation agendas under common strategic science and policy areas)
- Fund joint initiatives and joint calls (on CCIVA research)
- ❖ Share knowledge (in support to European and CIRCLE-2 member organisations)

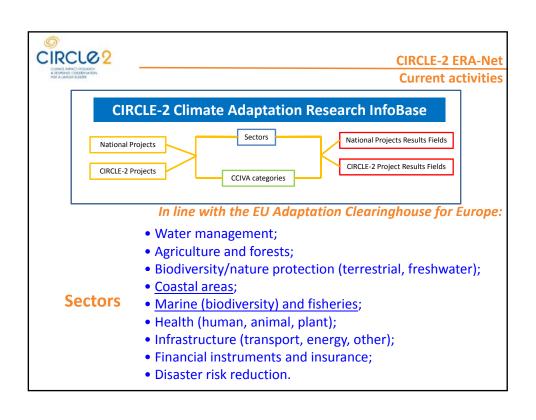

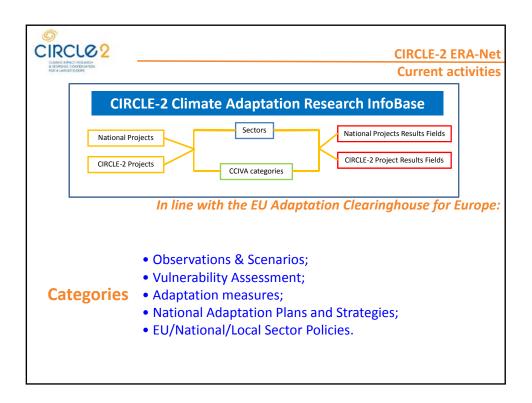

CIRCLE-2: Joint Calls for Research Proposals

1st Call - CIRCLE-2 MEDiterranean (2007)

Theme: "Integrated Coastal Zones and Water Management"

2nd Call - CIRCLE-2 NORdic (2007)

Theme: "Consequences of climate change for policy making in the Nordic countries"

3rd Call - CIRCLE-2 MOUNTain (2009)

Theme: "Climate change impacts (natural and anthropogenic factors) and response options in mountainous areas"

Future? – COASTWATER

Which aspects of this topic should be the research focus of the Call?

More information on calls and funded projects at www.circle-era.eu

CIRCLE-2: Joint Calls for Research Proposals

Future? – COASTWATER

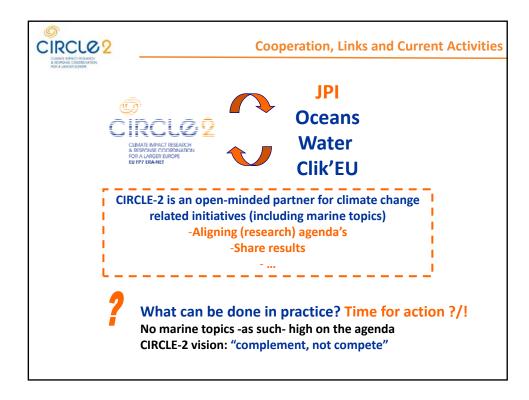

Researchers and funders interests (selection)

- Water Management (incl. infrastructure perspective)
- Impacts of sea level rise, Planning and Land Use (ICZM)
- Adaptation in Fisheries
- Tipping points for Ecosystems
- Extreme events

Tentative agenda: call launch end of 2011

More information on calls and funded projects at <u>www.circle-era.eu</u>

Conclusions and key messages

Take out messages

- Stronger transnational scientific (and policy networks) can play a very important role in Climate Adaptation at different scales.
- ❖ Political commitment is not the only driver in cooperation (<u>but</u> is very much welcomed and necessary to gather momentum).
- ❖ Support to practical (transnational) research funding activities can yield great results.
- **CIRCLE-2** (2010-2014) is dedicated to **Climate Adaptation** research and hopes to serve as a <u>meeting point</u> for researchers and decision-makers working in this field.

Thank you for your attention!

CIRCL® 2

CIRCLE-2: Overview

Project Name: Climate Impact Research & Response Coordination for a Larger Europe

Funding Scheme (FP7): Coordination and Support Action

Project's Cost: € 2,27 million

EU Financial Contribution: € 2 million

Duration: 48 months (01 May 2010 - 30 April 2014)

Coordinator: Tiago Capela Lourenço, FFCUL, Portugal

EU Project Officer: Wolfram Schrimpf, DG RTD

Annex X - MARINEBIOTECH CSA, Steinar Bergseth

Coordination and Support Action – Marine Biotechnology (CSA-MB)

«MARINEBIOTECH»

Coordinator Steinar Bergseth

First SEAS-ERA Strategic Forum, 7th September 2011

History (I)

- ESF-marine boards position paper of 2001.
- EC background paper no. 10 on Marine Biothecnology (2006).
- «The Bremen meeting» (2007). Expert meeting on MB, hosted by the EC.
- EC-US task force on biotech (marine genomics) Monaco 2008.
- EC: European strategy for marine and Maritime Research (2008)

History (II)

 KBBE-net established a Collaborative Working Group on Marine Biotechnology (Aug. 2008).

«Background and recommendations on future actions for integrated marine biotechnology R&D in Europe» (Oct. 2009).

http://ec.europa.eu/research/bioeconomy/biotechnology/publications/index en.htm

- Areas of common interest:
 Marine bioprospecting/biodiscovery, State of the art R&D tools, Molecular aquaculture,
 Biomass production.
 Industrial development based on biotech within all areas
- Need to develop coordinated European actions through funding agencies and other stakeholders → Establish an ERA-net within marine biotech.
- ESF-Marine board launched a new position paper, no. 15 (Sept. 2010).

«Marine Biotechnology: A New Vision and Strategy for Europe»

- 4 recommendations:
 Create a communication strategy, develop research strategy and align across Europe, improve technology transfer and academy industry interactions, improve training and education.
- Contribution to the societal challenges:
 Healthy food, sustainable energy, securing environmental health, securing human health
 and well-being, industrial products and processes.

History (III)

July 2010: FP7 call to establish a CSA within Marine Biotechnology

January 2011: Application delivered.

May 2011: Invitation for contract negotiations.

September 2011: Negotiations ended – startup 1st October.

AIMS

Mobilise funding agencies and other stakeholders

to participate in a future ERA-net with

the critical mass needed

to fund transeuropean R&D projects of high quality

within Marine Biotechnology.

Marine Biotechnology

... the use of marine bioresources as the <u>target or source</u> of biotechnical applications.

OECD (single definition):

The application of science and technology to living organisms, as well as parts, products and models thereof, to alter living or non-living materials for the production of knowledge, goods and services.

Marine Biotechnology

... the use of marine bioresources as the <u>target or source</u> of biotechnical applications.

The Project (I)

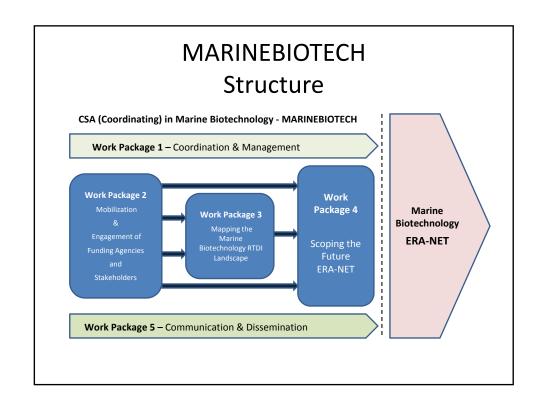

The Partners

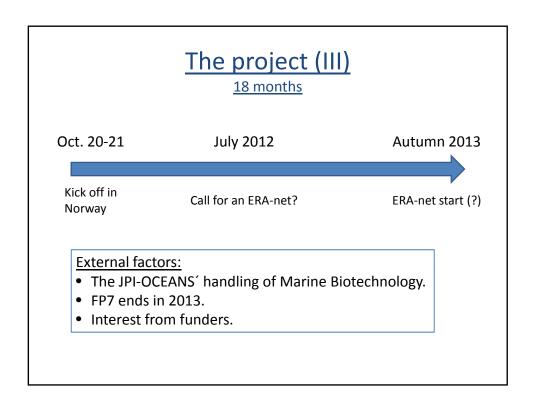

- The Research Council of Norway (RCN) Coordination
- 2. VLIZ (Belgium)
- 3. Norgenta (Germany)
- 4. DTU (Denmark)
- 5. CNRS –Roscoff (France)
- 6. IFREMER (France)
- 7. ESF-Marine Board (France)
- 8. IAMC-CNR (Italy)
- 9. FCT (Portugal)
- 10. Tübitak (Turkey)
- 11. Biobridge (UK)

 Project management

The Stakeholders

- Funding organisations
- ERA-nets
- The JPI-OCEANS
- Academia
- ETPs
- EuropaBio
- Industry
- Biotech organization with interest in marine biotech

Links, activities, issues ...

- Infrastructures / tools for marine biotech
 - Models (animals, cells, -omics platforms, etc...)
- Societal outreach
- Industries (ETPs, SMEs & established industry)
- The KBBE, JPI, ERA-nets, ...
- Links through MARINEBIOTECH's stakeholder meetings
- The academy industry link
- ..

There is a wide Marine Biotech horizon to scan.
To be done in the MARINEBIOTECH CSA.
We keep in touch!

Annex XI - Black Sea ERA-NET, Serban Panaitescu

Networking on Science and Technology

in the Black Sea Region

Black Sea-ERA.NET

Dr. Eng. Serban Panaitescu Project coordinator

Brussels, Sept.7th, 2011 First SEAS-ERA Strategic Forum

• UEFISCDI • 21-25 Mendeleev Str., 1st district, 010362, Bucharest- Romania • Tel./Fax.: +40 21 311.59.92•
• Website: www.uefiscdi.ro •

Networking on Science and Technology in the Black Sea Region

Duration: Jan.2009 - Dec. 2011

- Coordinator: Executive Agency for Higher Education, Research, Development & Innovation Funding (Ministry of Education, Research, Youth and Sport), Romania
- Project partners: 17 programme owners and/or programme managers from 13 countries

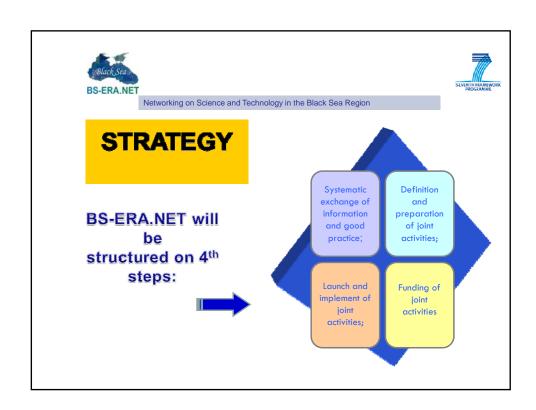

Main objectives of the BS-ERA.NET project

- Reducing the fragmentation of the European Research Area (ERA);
- Enhancing research cooperation in Europe by fostering integration of Black Sea Region into the ERA;
- Enhancing the complementarity and synergy between the FPs and activities carried out in the framework of intergovernmental structures;
- Extending and adding value to the existing science and technology cooperations and to develop a multilateral cooperation in the region;
- Improving interregional research cooperation;
- Contributing to the EU-BS cooperation in science and technology;

The main outputs of the BS-ERA.NET project

,

- Launching and Implementing of an Pilot Joint Call on a specific priority;
- ➤ BS-ERA.NET Position Paper on RTDI cooperation in BS region which will consist of a regional report for RTD priorities for the sustainable development of the BSR cooperation;
- Elaboration of the Black Sea Research Programme (BSRP).

5

Networking on Science and Technology in the Black Sea Region

BS-ERA.NET Information exchange (I)

Three main dissemination activities were developed so fare:

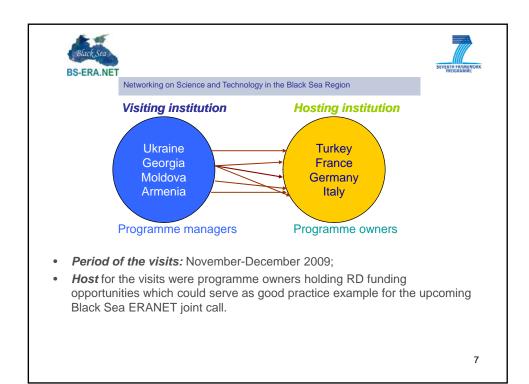

Short-term exchanges of programme managers for information and best practice identification

International Exchange Conference - "Towards a joint approach to a sustainable S&T programme in and with the Black Sea Region",

was held in Bucharest on December, 8th and 9th, 2009.

R&D Programmes Database In collaboration with the ERA RUS project, a searchable database with the R&D programmes is available through the project website. (www.bs-era.net)

Online QUESTIONNAIRE for RESEARCH INFRASTRUCTURE IN THE EXTENDED BLACK SEA REGION

rios. Oios olded

The BS-ERA.NET Pilot Joint Call;

- Publication date: October 4th 2010
- Submission Deadline: January 14th 2011
- ▶ PJC's main objective: to promote the European research targeting the Black Sea region in the Environment and Energy fields taking a proactive and innovative approach to developing solutions for a sustainable development.
- ➤ the PJC represents an early step towards meeting the overall aim of BS.ERA.NET project, the Black Sea Research Programme.

BS PJC Topics:

I. Climate and Environment

- Climate: Exploitation and transport of mineral resources: impact on environment;
- Sustainable management of resources: Water pollution prevention options for coastal zones and tourist areas;

II. Energy

- Renewable energy sources: Hydrogen production from H2S- rich Black Sea Water:
- 2. CO2 capture and storage technologies for zero emission power generation in the Black Sea region;

Socio-economic aspects could be included in the research proposals where relevant.

9

Networking on Science and Technology in the Black Sea Region

Project consortia:

- at least 3 eligible institutions from 3 different countries, of which at least one from an EU country and one from a non-EU BS country;
- the eligible institutions can be higher education or research institutes, R&D companies and SMEs.
- these project partners must be eligible for funding by their respective national Funding Party which are members of the Group of Funding Parties.

What kind of instruments / funding schemes will apply?

- **Joint research project** which may address mainly applied research but to a certain extend basic research could be addressed too.
- Measures to enhance mobility, exchanges and access to medium /large scale infrastructures.
- -The project duration: between 18-36 months

Funding& Financial contribution:

max. funding allocated per project is €300,000.

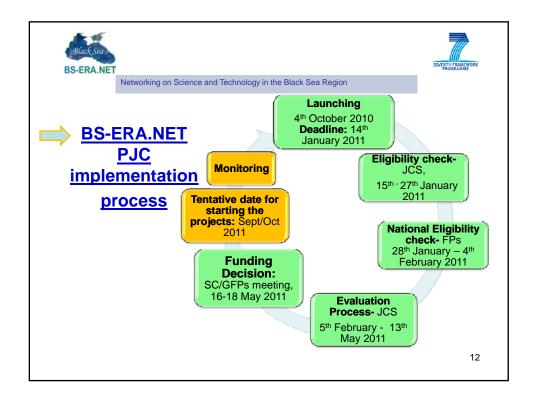

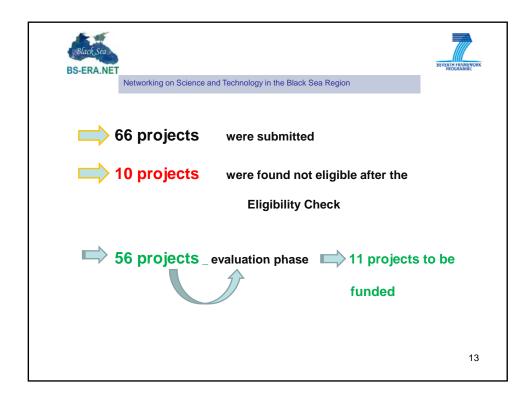

Funding mode

- "Virtual Common Pot", following the principle of "just retour";

Submission Tool:

Call Management System PT-Outline (online submission)

Designing and implementing the first BS-ERA.NET Joint Call

Lessons learnt

a joint call should

- Be in line with the objectives of each funding programme
- Do not be in conflict with specific regulatory provisions of any funding programme
- **Topics** common RTD priorities/objectives
- Implementation rules flexible, easy to be "adopted" by the funding parties

Designing and implementing the first BS-ERA.NET Joint Call (cont.)

Lessons learnt

Selection& funding of RTD projects

Eligibility - applicants (acc. to the call and the national criteria)

- project relevance (to the call objectives **and** to the funding programme objectives)

Evaluation (we had to develop and decide on)

- Evaluation criteria, ranking mode, peer review process
- Guidelines for evaluation

15

Networking on Science and Technology in the Black Sea Region

Designing and implementing the first BS-ERA.NET Joint Call (cont.)

Lessons learnt

Selection& funding of RTD projects

Evaluation criteria (most common)

Consortium strength

Project merits

Project plan and costs

Results and exploitation/impact

Designing and implementing the first BS-ERA.NET Joint Call (cont.)

Lessons learnt

Ensuring the selection& funding of RTD best project

Key factor: THE EVALUATORS!

- Setting up a data base of evaluators:
 - (a) using existing international panels?
 - (b) building a new one with the GFP?
- Selection of evaluators: To ensure the scientific quality and avoid conflict of interests?

17

Networking on Science and Technology in the Black Sea Region

Designing and implementing the first BS-ERA.NET Joint Call;

Lessons learnt

Key factor for the successful implementation of a joint call – to be attractive to funding organisation

- Rules easy to be integrated
- •Flexibility (e.g. different starting date according to the national calls/contract conclusion, reporting periods,..)
- Transparency of evaluation
- •Funding mode: juste retour, common pot (virtual or real)???
- Monitoring and assessment of the Joint Call

Designing and implementing the first BS-ERA.NET Joint Call;

- What we should have in mind when establishing the rules of the Call:
- Design a transparent system;
- Keep it as simple as possible;
- Establish and agree on the all the details from the very beginning;
- Do not change the rules during the call;
- Be innovative; Be efficient; Be focused;
- Respect the agreed time frame;
- Learn from other bad and good practices of other ERA-NETs calls
